

The ultimate objective of the professional contribution made by the company to a project is to ensure that a pleasant and safe thermal, visual and acoustic environment is provided for the benefit of users, whether working or at leisure, health or sick. In meeting this objective the company is also mindful of the need for conservative and sustainable use of natural resources and to minimise environmental pollution which might emanate from its activities.

We subscribe to the concept of environmentally aware design and will support the activities of the entire development team in meeting this objective. In addition to our design approach we are also committed to reducing the impact of our own activities on the environment and assisting our clients by encouraging them to use sustainable resources.

- To ensure compliance with all applicable environmental legislation and regulations
- To reduce emissions and prevent pollution
- To improve our waste management practices
- To reduce our consumption of natural resources
- To minimise noise and other nuisances
- To assist in the management of ecology
- To continually assess our environmental performance
- To assist in the investigation of environmental incidents in which we are involved
- To make our environmental information available to interested parties

The necessary personnel and financial resources are allocated to assist us in meeting our environmental objectives and targets and are reviewed as appropriate. In addition we continue to raise the level of awareness of our environmental approach both within our company and also to our sub-contractors and suppliers.

We remain committed to operating our environmental procedures in a manner that attains and sustains compliance with the internal Management Standard.
